

Energean hosts next generation of scientists at its onshore facilities

Students from the Geology School and the Chemical Engineering School of the Aristotle University of Thessaloniki visited Energean's onshore facilities at Nea Karvali, Eastern Macedonia, Greece

Under the supervision of Prof. Markos Assael and Prof. Andres Georgakopoulos respectively, the students from the Chemical Engineering School and the Geology School were given a tour at the “Sigma” processing plant and introduced to the operating and safety procedures followed in Greece’s sole hydrocarbon producing and processing complex.

Moreover, in the context of its continuous collaboration with Eastern Macedonia & Thrace Technical Institute (EMaTTech), Energean hosted students studying at the 7th and the 3rd Semester of the Oil & Gas Technology Department. It should be noted that approximately 25% of Energean’s employees have graduated from EMaTTech.

Energean has always been supporting the new generation of scientists who wish to acquaint themselves with the process of hydrocarbon production. The Company considers this process to be very important for the development of the skills of Greece's future scientists, in a section which could substantially help the country's economy return to growth.
